2. Citations and explanations

The claimed invention relates to a procedure to transmit information (e.g. text messages, telephone numbers) in connection with a telephone answering service in a mobile telephone system. According to the invention the mobile answer device stores information which originates from the calling subscriber. When the called subscriber establishes a connection to the mobile answer device to listen to the recorded speech message, the information is transmitted in parallel to the called subscriber.

The following documents were cited in the international search report:

D1 : EP 0739147 A1

D2 : WO 9320640 A1

D3 : EP 0662763 A2

D1 discloses a mobile telephone answering service comprising storing of a speech message. The telephone number of the calling subscriber is also stored (see column 6, lines 45-55). The stored speech message is transferred to the called subscriber in response to an inquiry.

D2 discloses a telephone answering device that displays information about messages recorded within the device and provides selective access to those messages based on the displayed information.

D3 discloses an integrated electronic mailbox for storing and retrieving various types of electronic messages addressed to a specific individual (see column 2, line 40- column 3, line 69).

• **Supplemental Box**

(To be used when the space in any of the preceding boxes is not sufficient)

• Continuation of: Box V.

However, the solution according to the claimed invention, specially the transferring of the telephone number or other information from the mobile answer device to the called subscriber in parallel with the speech message, is not known from the cited documents D1-D3 and is not considered to be obvious to a person skilled in the art.

Therefore, the invention claimed in claims 1-7 is considered to be novel (N), to involve an inventive step (IS) and also to have industrial applicability (IA).

(54) Title: PROCEDURE TO TRANSMIT INFORMATION AT TELEPHONE ANSWERING SERVICE

**(57) Abstract**

The invention relates to a procedure to transmit information at a telephone answering service, especially in mobile telephone systems. The telephone answering service has a voice mailbox for recording of speech, and also means of transmitting text message to the mobile telephone, especially via SMS (Short Message Service). The invention makes possible an improved functionality in the system in so far as the text message is transmitted in parallel to the mobile telephone from which listening to the voice mailbox is performed. The text message usually contains a telephone number which can be connected with applications in the mobile terminal. The invention makes possible that telephone numbers or personal messages, manually or automatically, are stored in the mobile answer function and are transmitted to the listening mobile terminal.
